ANIMAL HUSBANDRY DIVISION  
HAWAII AGRICULTURAL EXPERIMENT STATION  
UNIVERSITY OF HAWAII

Progress Notes on Experiments and Other Items of Interest

No. I

September, 1933

These progress notes on experimental work and other items of interest to livestock men in the Territory are issued from time to time by the Animal Husbandry Division. You are invited to suggest other lines of research that you deem important and to submit inquiries to the University.

VALUE OF KOAHAOLE (LEUCAENA GLAUCA)  
AS A FEED FOR DAIRY CATTLE.

The Plant

Koahaole (*Leucaena glauca*) is a shrub or small tree, native of tropical America but now widely distributed over the tropics. In the Territory of Hawaii it is abundant in the lowlands of both the leeward and windward sides of the islands.

This plant has long been used in a minor way as a feed for livestock but only in the last few years has there been a fuller appreciation of its value as a forage crop, and many acres have been planted to this legume in the past year, particularly on the large beef ranches.

A recent analysis by the Hawaii Experiment Station shows Koahaole to have the following composition:

	<u>Leaves</u>	<u>Immature Seed Pods</u>
Moisture	8.77%	10.97%
Protein	24.45%	20.80%
Fat	4.62%	1.55%

ANIMAL EXPERIMENT DIVISION

UNIVERSITY OF HAWAII

Progress Report on Experimentation and Other Items of Interest

September, 1934

These progress notes on experimental work and other items of interest are prepared for the Division and are intended to be used by the Division. They are intended to be used by the Division and are intended to be used by the Division.

REPORT ON EXPERIMENTAL (HAWAIIAN) AS A FIELD FOR BAIT BATTER

The Field

The field (Hawaiian) is a small area of land, about 100 feet long and 50 feet wide, situated on the edge of the field. It is a small area of land, about 100 feet long and 50 feet wide, situated on the edge of the field.

This field has been used for a number of years as a field for the purpose of testing the effect of the field on the field. It has been used for a number of years as a field for the purpose of testing the effect of the field on the field.

A recent analysis by the Hawaii Experiment Station shows

the following results:

Item	Amount
Field	100.00
Field	50.00
Field	25.00

	<u>Leaves</u>	<u>Immature Seed Pods</u>
Nitrogen free extract	39.36%	37.04%
Fiber	14.88%	24.13%
Ash	7.92%	5.51%

### Plan of Experiment

To get some definite information about the feeding value of this plant for dairy cows, one acre of an area of volunteer Koahaole growth on the University Farm was fenced off in order to confine the animals in test to a definite known area. Three purebred Holstein cows were pastured in this area at different times with and without additional feeds as follows:

:	:	Days Since	:	:	:	:
:	:	Calving when	:	:	:	Rainfall
:	:	Started	:	:	:	During
:	:	on Koahaole	:	Date	:	Period.
:	Cow	Pasture	:	Started	:	Pasture
:	:	:	:	:	:	Inches
:	49	110	:	June 7	:	60
:	:	:	:	:	:	:
:	52	50	:	June 7	:	90
:	:	:	:	:	:	:
:	62	70	:	Dec. 7	:	120
:	:	:	:	:	:	13.23

It will be noted that cows 49 and 52 were started together on June 7th in the one acre. After 60 days, cow 49 was put back on the regular herd feed again because of shortage of feed in the Koahaole acre. Cow 52 was continued another month when the feed became so limited that it was necessary to discontinue the test for the time being. Rainfall records given above show that only a limited amount of rain fell during these test periods. By Dec. 7, after 90 days of rest and 5.95 inches of rainfall, the stand of Koahaole had made an excellent recovery and cow 62 was started on test and continue until April 7.

Salt and drinking water were available at all times and cow 49 received additional concentrates. However, no feeds other than the Koahaole pasture were provided for cows 52 and 62.

The Milk Yields

(Average per day during ten day periods beginning at calving time)

Days since calving:	Cow 49	Cow 52	Cow 62
	Koahaole pasture & other concentrates	Koahaole pasture only	Koahaole pasture only
1 - 10	37.1 lbs.	41.6 lb.	29.5 lbs.
11 - 20	41.9	47.5	32.5

------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	---------	--	--	--

The cows remained in the Koahaole acre day and night being brought to the barn only twice daily for milking.

Cows were weighed at monthly intervals. Cows 49 and 62 weighed the same at the beginning and end of their periods in Koahaole. Cow 52 lost 55 pounds.

#### Effect of Feeding Koahaole on Milk Flavor

Koahaole imparts a distinct undesirable flavor to the milk of cows fed solely on this legume. This was first observed by K. Kuwamoto, Herdsman at the University Farm and when samples of milk, some of which were from Koahaole fed cows, were submitted to a class of nine advanced students in Home Economics, all of them independently, reported that sample 62 (from Koahaole fed cow) had a strange, disagreeable, strong or queer flavor. They did not know the source of any of the samples. Possibly if fed right after milking the flavor might not be so marked in milk drawn twelve hours later. While this unfortunately limits the use of this valuable legume for cows in milk, it could undoubtedly be fed to advantage to young stock not yet in production or to cows during their dry period.

#### Gains Made by Heifers on Koahaole Pasture

Six bred heifers put in the Koahaole pasture on April 15, and given additional supplementary feeds averaged 72 pounds gain in one month.

#### Summary and Conclusions

1. The one cow receiving concentrates in addition to the Koahaole pasture (number 49) produced materially better when on Koahaole pasture indicating a high value for this material as a roughage.

The cows remained in the Koshale pens and night being  
brought to the barn only twice daily for milking.  
Cows were weighed at monthly intervals. Cows 42 and 43  
weighed the same at the beginning and end of their periods in  
Koshale. Cow 42 lost 20 pounds.

### Effect of Feeding Koshale on Milk Flavor

Koshale imparts a distinct undesirable flavor to the milk  
of cows fed solely on this forage. This was first observed by  
W. H. Newman, Herdsman at the University Farm and when samples of milk  
some of which were from Koshale fed cows, were submitted to a class  
of nine advanced students in Home Economics, all of them independently  
reported that sample 42 (from Koshale fed cow) had a strange, disagreeable,  
strange or queer flavor. They did not know the source of any  
of the samples. Possibly it was the first time the flavor might  
not be so marked in milk drawn twelve hours later. While this was  
fortunately limited the use of this valuable forage for some time,  
it could undoubtedly be fed to advantage to young stock not yet in  
production or to cows during their dry period.

### Gains Made by Heifers on Koshale Forage

Six pure bred heifers in the Koshale pasture on April 15, and  
given additional supplementary feeds averaged 75 pounds gain in one  
month.

### Summary and Conclusions

1. The only cow receiving concentrated in addition to the  
Koshale pasture (number 42) produced markedly better milk than on  
Koshale pasture indicating a high value for this material as a  
forage.

2. Cows on Koahaole pasture only with no concentrates provided, produced only slightly less milk than when the regular feeds (green soiling crops and concentrates) were provided. This indicates that this forage crop has a high value as a feed for dairy cows, and under most conditions it should prove an efficient means of reducing milk production costs.

3. Koahaole withstands drought fairly well and while it makes little or no growth during very dry spells, it seems to recover rapidly when rains come again.

4. Koahaole unfortunately imparts an undesirable flavor to the milk of cows largely fed on this legume, which greatly limits its use for dairy cows.

L. A. HENKE.
